ADAPTOR FEATURES

Utilising the unique features of the connex system we are pleased to be able to offer an adaptor based on the connex to enable safe and quick testing of lighting circuit protection in the field.

Whether you have the original connex fitted or one of the outstanding NuVo LED range, this adaptor will enable testing to be carried out in less than 30 seconds without exposing workers to any electrical hazards.

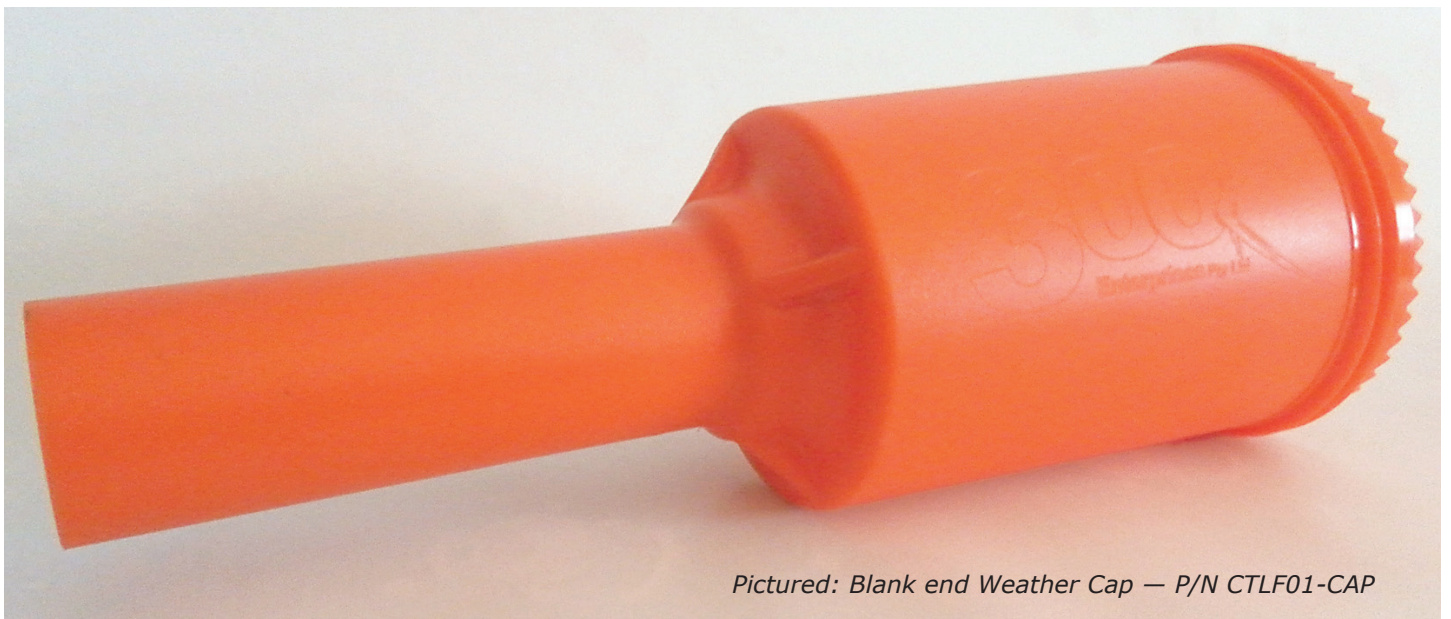

Simply select a luminaire on the circuit you wish to test, remove the fitting and plug in the adaptor to perform protection device testing. Once testing is completed, unplug the adaptor and refit the luminaire.

WEATHER CAP FEATURES

The weather cap is simply a blanked off connex housing which enables the cover to be fitted to the connex base on a pole while the light fitting is removed for an extended period to ensure no contaminants enter the connector and affect its operation.
